

**A
FIELD PROJECT REPORT
ON
“USER FEEDBACK ANALYSIS FOR IMPROVING UPXGEN
PLATFORM”
AT
UV KNOWLEDGE LINK PVT. LTD.
SUBMITTED TO**

**“SAVITRIBAI PHULE PUNE UNIVERSITY”
IN PARTIAL FULFILLING OF THE REQUIREMENT
FOR THE AWARD OF THE DEGREE OF
BUSINESS ADMINISTRATION (MBA).**

**UNDER THE GUIDENCE OF
DR. RADHIKA KHAIRNAR**

**SUBMITTED BY
KATHE KHUSHALI DINKAR**

THROUGH

**DR. MOONJE INSTITUTE OF MANAGEMENT AND
COMPUTER STUDIES, NASHIK
(2025-2026)**

DECLARATION

I undersigned hereby declare that, the field project titled “**User feedback analysis for improving UPXGEN platform**” is executed as per the course requirement of a two-year full-time MBA Program of Savitribai Phule Pune University.

This report has not been submitted by me or any other person to any other University or Institution for a degree or diploma course. This is my own and original work.

Place: Nashik

Name: Kathe Khushali Dinkar
MBA-I Business Analytics

Date:

ACKNOWLEDGEMENT

It is my pleasure to thank all who helped us directly or indirectly in the preparation of this project report. It is a great privilege to record our deep sense of gratitude to all the faculties who stood by us throughout the making of this field project report. It was very exciting for us to work on the project **“User feedback analysis for improving UPXGEN platform”**

During this work, I am gaining both practical as well as theoretical knowledge regarding it. My first thanks go to Dr. Moonje Institute of Management and Computer Studies, Nashik for providing us with an excellent environment like computer centre, library as well as providing us excellent faculty guiding for the completion of my field project, I am greatly obliged to my field project guide Dr. Radhika Khairnar for his benevolent guidance, suggestions, and help for preparing this project.

Place: Nashik

Name: Kathe Khushali Dinkar
MBA-I Business Analytics

Abstract:

This project, undertaken as part of the MBA specialization in Business Analytics, focuses on systematically collecting and analysing user feedback from beta testers of the UPXGEN platform. The study aims to evaluate user experiences with competitions, mentorship, and career opportunities, identify critical pain points affecting satisfaction and engagement, and develop actionable recommendations to enhance usability and readiness for market launch.

The research methodology involved survey-based data collection from a diverse group of student users, followed by descriptive and comparative analysis of responses. The findings reveal that internships are the most valued feature, highlighting career relevance as the strongest driver of engagement. While daily quizzes and notifications are effective tools for retention, challenges such as slow loading, unclear instructions, and difficulties in unlocking opportunities through the coin/streak system emerged as significant barriers. Limited rewards and usability issues were identified as the primary pain points reducing overall engagement.

Based on these insights, the project recommends expanding career-oriented features such as paid internships and certifications, simplifying navigation and performance speed, refining gamification mechanics, and strengthening communication strategies. Marketing efforts should prioritize social media campaigns and campus promotions to maximize outreach. Pre-launch priorities include delivering more opportunities, fixing usability gaps, and enhancing rewards to align with user expectations.

This project not only demonstrates the application of Business Analytics in deriving actionable insights from user data but also contributes to the practical development of the UPXGEN platform. The collaboration with the UPXGEN Team provided valuable support and contextual understanding, ensuring that the recommendations are both data-driven and industry-relevant.

COMPANY PROFILE

Company Profile – UV Knowledge Link Pvt. Ltd.

UV Knowledge Link Pvt. Ltd., incorporated in 2016, is a technology and engineering solutions company that has established excellence in software development, mobile applications, website design, ERP systems, industrial automation and Industry 4.0 innovations. With a strong focus on customer satisfaction, UVKLink delivers reliable, customized solutions that meet diverse client requirements across industries.

[Photo with the CEO of UV Knowledge Link Pvt. Ltd.](#)

The CEO of UV Knowledge Link Pvt. Ltd. (UVKLink) is **Mr. Yuvraj Vadaje**, the Founder & Chief Executive Officer. He has a strong background in mechanical engineering and over 17 years of industry experience in automotive design and development.

Vision: To become a leading global innovator in engineering and digital solutions by leveraging world-class technology and a diverse team of experts.

Mission: To build lasting partnerships with clients by delivering trustworthy, reliable, and high-quality solutions across the entire product development lifecycle—from concept to manufacturing.

Chapter 1

INTRODUCTION

UPXGEN is a dynamic, all-in-one career growth platform designed to empower students and young professionals by integrating learning, competition, mentorship, and hiring into a single ecosystem. It enables users to participate in a wide range of competitions such as hackathons, designathons, ideathons, and case competitions, allowing them to showcase their skills, solve real-world problems, and gain recognition. Beyond competitions, UPXGEN offers access to live challenges, internships, and job opportunities, helping users transition from learning to doing and ultimately earning. The platform also provides personalized 1:1 mentorship sessions, resume reviews, and career guidance from verified industry experts, ensuring users receive actionable insights and support.

UPLIFT NEXT GENERATION

Students can build hiring-ready profiles by showcasing their projects, earning certificates, and tracking their participation history. UPXGEN's personalized experience recommends relevant challenges and mentors based on individual goals, guiding users through a structured growth journey. Progress tracking features such as milestones, submission feedback, and performance insights help users stay consistent and improve daily. With key features like verified mentors, real-world challenges, gamified engagement, and a clean, modern interface, UPXGEN stands out from traditional platforms by focusing on practical career development. It's ideal for students from any stream, freshers, developers, designers, and creators who want to grow their careers through real work and meaningful connections.

The platform operates through a simple flow: users sign up, set goals, join competitions or challenges, build and submit their work, receive feedback, connect with mentors and employers, and unlock career opportunities. For support, UPXGEN offers responsive assistance via email at support@upexgen.com, with a typical response time of 24–48 hours.

1.1 Statement of the Problem

In the current digital era, students and young professionals face significant challenges in bridging the gap between academic learning and real-world career opportunities. While platforms exist for online learning, job applications, or competitions, they are often fragmented and fail to provide a holistic growth journey. UPXGEN was designed to address this gap by combining competitions, mentorship, and career opportunities into one integrated ecosystem. However, as a newly launched platform, UPXGEN is still in its beta phase and faces critical challenges related to usability, engagement, and awareness. Without systematic user feedback, the platform risks low adoption, limited satisfaction, and reduced credibility among its target audience. Therefore, analysing user feedback becomes essential to identify pain points, prioritize improvements, and ensure the platform is ready for a successful market launch.

1.2 Purpose and Objectives of the Project

The purpose of this project is to evaluate the UPXGEN platform through structured user feedback analysis, ensuring that the platform evolves into a student-friendly, career-relevant solution. The specific objectives are:

- To collect and analyse user feedback from beta testers of the UPXGEN platform, focusing on their experiences with competitions, mentorship, and career opportunities.
- To identify and prioritize the most critical user pain points that affect satisfaction and engagement of users.
- To develop actionable recommendations that enhance platform usability, improve engagement strategies, and support readiness for market launch.

1.3 Theoretical Framework

This project is guided by two key frameworks:

- **User-Centered Design (UCD):** This approach emphasizes designing platforms based on user needs, feedback, and usability testing. By applying UCD, UPXGEN can refine its interface, features, and engagement strategies to align with student expectations.
- **Technology Acceptance Model (TAM):** TAM suggests that user adoption of technology depends on two factors: usefulness and ease of use. For UPXGEN, this means students must find the platform both valuable (career opportunities, mentorship) and simple to navigate.

Together, these frameworks provide a structured lens to analyse feedback, identify gaps, and propose improvements that directly influence adoption and long-term success.

1.4 Significance of the Project

This project holds significance at multiple levels:

- **For Students:** It ensures that UPXGEN becomes a reliable platform for career growth, offering practical opportunities beyond theoretical learning.
- **For Mentors and Employers:** It creates a credible ecosystem to connect with motivated talent, potential interns, and contribute to student development.
- **For UPXGEN Developers:** It provides a roadmap to refine usability, engagement strategies, and feature design based on real user insights.
- **For Academia:** It demonstrates the importance of integrating user feedback into EdTech innovation, contributing to research on student engagement and technology adoption.

Ultimately, the project contributes to building a sustainable, impactful career platform that addresses real student needs and strengthens UPXGEN's readiness for market launch.

1.5 Definition of Terms

- **UPXGEN:** A career growth platform offering internships, competitions, mentorship, and job opportunities in one ecosystem.
- **Beta Testers:** Early users of the platform who provide feedback before its official launch.
- **User Feedback Analysis:** Systematic collection and interpretation of user opinions, experiences, and suggestions to improve product design.
- **Pain Points:** Specific problems or challenges faced by users that reduce satisfaction or engagement.
- **Usability:** The ease with which users can navigate and interact with the platform's features.
- **Engagement:** The level of active participation and involvement of users in platform activities such as competitions, mentorship, and projects.
- **Market Launch:** The official introduction of the platform to a wider audience after testing and refinement.

Chapter 2

LITERATURE REVIEW

1. Feedback in EdTech App Development for Success

[Feedback in EdTech App Development for Success | MoldStud](#)

The article highlights the critical role of user feedback in the success of EdTech app development. It explains that many learners disengage from digital platforms due to usability issues, making continuous feedback collection essential for improving satisfaction and retention. Developers are encouraged to use surveys, user testing, analytics tools, and focus groups to gather insights, while segmenting feedback by demographics to ensure inclusivity. The piece emphasizes the importance of creating feedback loops and applying agile methods to quickly implement user suggestions, which can significantly boost engagement and loyalty. Ultimately, the article argues that structured, data-driven feedback not only enhances usability and accessibility but also strengthens trust and community, making EdTech platforms more effective and sustainable.

These insights are directly relevant to UPXGEN, which aims to improve its usability and engagement before market launch.

2. Gamification in Learning Management Systems: A Systematic Literature Review

[Gamification in Learning Management Systems: A Systematic Literature Review](#)

The MDPI article “Gamification in Learning Management Systems: A Systematic Literature Review” provides a comprehensive analysis of 139 studies published between 2013 and 2025, focusing on how gamification elements are integrated into digital learning platforms. The review found that badges, points, and leaderboards are the most commonly used gamification tools, with strong evidence that they enhance student motivation, engagement, and learning outcomes. It also highlights benefits such as improved self-regulated learning, collaboration, and enjoyment, while noting challenges like poor design, over-reliance on extrinsic rewards, and limited diversity of gamification strategies. Most studies were conducted in higher education, particularly in computer science courses, and relied heavily on quantitative methods. The article concludes that gamification can significantly improve digital learning experiences, but its success depends on thoughtful design and alignment with educational goals.

This article is highly relevant to my project “User Feedback Analysis for Improving UPXGEN Platform” because UPXGEN already incorporates gamification features such as coins, streaks,

and leaderboards to drive student engagement. The findings validate that these elements can indeed boost motivation and participation, but they also caution against poor design or excessive reliance on rewards, which could frustrate users. By analysing beta tester feedback, my project can determine whether UPXGEN's gamification system is perceived as motivating or whether adjustments are needed to balance extrinsic rewards with meaningful learning experiences. In essence, the MDPI study provides both theoretical grounding and practical evidence to support my recommendations for refining UPXGEN's gamification strategy before market launch.

3. Student Learning Engagement in Digital Platforms: A Literature Review (Roul & Mohalik, 2025)

[i-manager Publications | Academic Journals & Research](#)

The article reviews 40 research publications from India and abroad to assess how students engage with digital platforms. It notes that student engagement is critical for achieving desirable learning outcomes, but online environments pose unique challenges due to shorter attention spans and distractions. For example, studies show that human attention averages only 8 seconds, but can extend to 120 seconds when watching videos, underscoring the importance of interactive and multimedia content.

The review identifies engagement as a multi-dimensional process:

- Behavioural engagement (active participation, attendance, submissions).
- Emotional engagement (interest, motivation, enjoyment).
- Cognitive engagement (mental effort, deep learning, problem-solving).

It concludes that engagement is shaped by a complex interplay of factors such as instructional design, teacher support, peer interaction, and platform usability. The authors recommend strategies like interactive content, personalized learning pathways, and feedback mechanisms to sustain student attention and improve outcomes in digital platforms.

This study is directly relevant to my project "User Feedback Analysis for Improving UPXGEN Platform". Since UPXGEN is designed to engage students through competitions, mentorship, and gamification, understanding the dimensions of engagement is crucial. The article's findings validate that engagement is not just about participation but also about emotional and cognitive

involvement, which aligns with UPXGEN's goal of creating a holistic career growth ecosystem.

For UPXGEN, beta tester feedback can reveal whether students feel emotionally motivated (through gamification and mentorship), cognitively challenged (through competitions and real-world tasks), and behaviourally active (through submissions and profile building). The insights from this literature review support the need to design features that sustain attention, provide interactive experiences, and balance usability with meaningful learning. In essence, the article provides a theoretical foundation for analysing user feedback and developing recommendations that enhance UPXGEN's engagement strategies before market launch.

4. Synthesis of Student Engagement with Digital Technologies: A Systematic Review of the Literature.

<https://link.springer.com/article/10.1186/s41239-021-00270-1>

The Springer article "Synthesis of Student Engagement with Digital Technologies: A Systematic Review of the Literature" (Nkomo, Daniel & Butson, 2021) examines how students engage with digital tools such as learning management systems, social media, and lecture capture technologies. The review highlights that engagement is a multi-dimensional construct encompassing behavioural, cognitive, and emotional aspects, but notes that there is no universally agreed definition of engagement, leading to inconsistencies in research. Most studies rely on self-reported surveys, which capture perceptions but not actual behaviours, while analytics tools provide more reliable insights into behavioural engagement. The article emphasizes that effective digital platforms must foster all three dimensions of engagement through interactive content, peer collaboration, and instructor support, while also addressing challenges such as short attention spans and digital distractions.

This article is directly relevant to my project "User Feedback Analysis for Improving UPXGEN Platform" because UPXGEN aims to engage students through competitions, mentorship, and gamification. The findings validate that engagement is not limited to participation but also involves emotional motivation and cognitive investment, which are critical for sustained adoption. For UPXGEN, analysing beta tester feedback can reveal whether students feel behaviourally active (through submissions and challenges), cognitively stimulated (through problem-solving tasks), and emotionally motivated (through gamification and mentorship).

The article also cautions against relying solely on self-reported feedback, suggesting that UPXGEN should combine survey insights with platform analytics to gain a holistic understanding of engagement. In essence, this literature provides a strong theoretical foundation for my project, supporting the development of recommendations that enhance usability, motivation, and overall student satisfaction before market launch.

Chapter 3

RESEARCH METHODOLOGY

3.1 Research Framework and Design

Table No- 3.1 Research Framework

Research Approach	Qualitative and Quantitative Research
Research Type	Descriptive Research
Primary Data Collection	Questionnaire
Secondary Data Collection	Books, Research Papers
Sample Size	100
Sampling Method	Convenience Sampling
Statistical Tools & Software	MS Excel and Google Form for data collection and analysis.

3.2 Participants

The study was conducted among 100 users, carefully selected to represent the diverse stakeholder groups of UPXGEN. These included:

- College Students: The primary users of the platform, encouraged to test features such as competitions, streaks, and gamification.
- Human Resource Professionals (HR): Engaged to evaluate the platform's alignment with recruitment practices and career readiness.
- Mentors: Experienced professionals and educators invited to assess the mentorship component and provide feedback on usability and guidance.

This participant pool ensured that feedback reflected both end-user experiences and professional expectations

3.3 Procedures

The study followed a stepwise process:

1. Introduction of UPXGEN: Participants were introduced to the beta version of the app through demonstrations and guided walkthroughs. They were informed about its objectives—career growth, competitions, mentorship, and gamification features.

2. Engagement Activities: Users were motivated to actively use the app and collect coins, which could be redeemed to unlock internships, mentorship sessions, and industry live projects.

Created with the help of AI tool

3.Survey Distribution: A structured questionnaire was circulated via Google Forms among the 100 users. The survey captured both quantitative (ratings, frequency of use) and qualitative (opinions, suggestions) data.

4.Feedback Collection:

- Questionnaires: Provided structured responses on usability, satisfaction, and engagement.
- Calls and Interviews: Conducted with selected participants to gather deeper insights into challenges faced.
- Observation: Informal monitoring of streak maintenance and participation levels was carried out to assess behavioural engagement.

5. Problem Identification: Feedback revealed critical issues such as:

- High coin requirements 1000 coins for internships, 500 for mentorship and 1000 for industry live project.
- Technical problems related to login and navigation.

6. App Improvement: Based on user feedback, coin requirements were revised to more realistic levels like 500 for internships, 200 for mentorship, 400 for industry live projects. Technical issues identified during beta testing were also addressed.

7. Re engagement: After updates, users resumed using the app, and further feedback was collected to validate improvements

3.4 Equipment and Materials

- **UPXGEN Application (Beta Version):** The central subject of evaluation.
- **Google Forms:** Used to design and distribute questionnaires.
- **Excel Spreadsheets:** Employed to tabulate and analyse survey data.
- **Communication Tools:** Mobile phones and online meeting platforms used for interviews and clarifications.
- **Documentation Tools:** Notes and transcripts maintained for qualitative analysis.

3.5 Data Collection

- Data was collected using a mixed-method approach combining quantitative and qualitative techniques.
- A structured Google Form questionnaire was distributed among 100 users like students, HR professionals, and mentors.
- The survey captured measurable data such as satisfaction ratings, frequency of app usage, and engagement levels.
- Telephonic and online interviews were conducted to gather deeper insights into user experiences and challenges.
- Informal observation of streak maintenance and participation helped assess behavioural engagement.
- All responses were systematically recorded and organized in Excel spreadsheets for analysis.
- Data cleaning was performed to remove incomplete or duplicate entries.
- Quantitative data provided numerical trends, while qualitative data revealed user perceptions and improvement areas.
- The combination of both methods ensured data reliability and comprehensive understanding of user feedback.

- This approach helped identify key issues such as coin requirements and login difficulties, guiding app improvements.

3.6 Ethical Considerations

- Ethical integrity was maintained throughout the study to ensure transparency and participant trust.
- Participants were informed about the purpose of the research and their role in providing feedback.
- Voluntary participation was emphasized, and consent was implied through engagement in surveys and interviews.
- All responses were kept confidential, and no personal identifiers were disclosed in analysis or reporting.
- Data was used solely for academic and developmental purposes, not for commercial exploitation.
- The study adhered to principles of honesty, fairness, and respect for privacy.
- Feedback was represented accurately and without bias to maintain credibility.
- Ethical compliance strengthened the validity and trustworthiness of the research outcomes.
- Participants were assured that their opinions would contribute to improving the UPXGEN platform.
- The research process followed all academic standards for ethical data handling and participant protection.

3.7 Summary

- The study followed a systematic and structured methodology to evaluate UPXGEN's usability and engagement.
- A total of 100 users participated through surveys, interviews, and observation.

- The process identified major issues such as high coin requirements and login difficulties.
- Based on feedback, the app was updated — coin thresholds were revised, and technical bugs were fixed.
- Users re-engaged with the improved version and provided positive feedback validating the changes.
- The integration of quantitative and qualitative data ensured balanced and reliable findings.
- Ethical practices and transparent communication enhanced the credibility of the study.
- The methodology provided actionable insights for refining gamification, mentorship, and usability features.
- The structured approach ensured academic rigor and practical relevance.
- Overall, the study served as a strong foundation for UPXGEN's future development and market readiness.

Chapter 4

DATA COLLECTION & ANALYSIS

4.1 Data Collection

Data collection is the systematic process of gathering information from various sources to analyze, interpret, and make decisions. It's a crucial step in research, business analytics, and academic projects because the quality of insights depends on the accuracy and reliability of the collected data. There are two methods of data collection.

Primary Source:

This is first-hand data collected directly by the researcher for a specific purpose. Examples:

- Surveys and questionnaires
- Interviews (face-to-face, phone, or online)

Secondary Source:

This is already existing data collected by someone else, used for analysis or reference. Examples:

- Online databases and websites
- Literature review on student engagement platforms.

4.2 Data Analysis

Table No: 4.0 - Demographic Profile of Respondents

Variables	Description	Frequency	Percentage
Gender	Male	41	41%
	Female	59	59%
	Total	100	100%
Profession	Student	91	91%
	Mentor	6	6%
	Recruiter/HR	3	3%
	Total	100	100%

1. How often do you use the UPXGEN app?

Table no: 4.1- Usability

Option	Response Count
Daily	36
Weekly	29
Monthly	10
Rarely	25

The table shows how often users engage with the UPXGEN app. A majority (36) use it daily, reflecting strong loyalty and consistent reliance on the platform. Weekly users (29) also form a significant group, showing steady but less frequent engagement. Monthly users (10) represent occasional participants, while rarely users (25) highlight disengagement or barriers to regular use. Overall, the data suggests a healthy base of active users but also a sizable segment that needs re-engagement strategies to boost retention and satisfaction.

Graph No: 4.1- Usability

2.Which feature do you use most?

Table no: 4.2- Most usable feature

Option	Response Count
Competitions	26
Internships	49
Mentorship	13
Industrial Projects	12

Internships received the highest responses (49), showing they are the most valued and frequently used feature of the UPXGEN app. Competitions follow with 26 responses, indicating moderate engagement. Mentorship (13) and industrial projects (12) have relatively low usage, suggesting limited appeal or accessibility. The strong preference for internships highlights career relevance as a key driver of user engagement. Competitions add variety but may need better rewards or clarity to grow further. Mentorship and projects require improvement or promotion to attract more users.

Graph No: 4.2- Most usable feature

3. How satisfied are you with the overall app experience?

Table no: 4.3- Satisfaction level

Option	Response Count
Very Satisfied	32
Satisfied	43
Neutral	20
Dissatisfied	2
Very Dissatisfied	3

The majority of respondents are satisfied with the UPXGEN app, with 43 reporting “Satisfied” and 32 “Very Satisfied.” This reflects strong overall approval and positive user experience. A moderate group of 20 respondents remain neutral, showing potential areas for improvement to convert them into satisfied users. Only a small minority expressed dissatisfaction (2 dissatisfied, 3 very dissatisfied), indicating limited negative sentiment. Overall, the data highlights a healthy satisfaction level but addressing neutral and dissatisfied users could further enhance engagement and loyalty.

Graph No: 4.3- Satisfaction level

4.How easy is it to navigate the app interface?

Table no: 4.4- Navigation interface

Option	Response Count
Very Easy	25
Easy	46
Neutral	22
Difficult	5
Very Difficult	2

Most users find the UPXGEN app easy to navigate, with 46 selecting “Easy” and 25 choosing “Very Easy.” This indicates that the majority experience smooth usability and clear interface design. A moderate group of 22 respondents remain neutral, suggesting some aspects could be improved for better clarity. Only a small minority reported difficulties (5 difficult, 2 very difficult), showing limited navigation issues. Overall, the data reflects strong usability, but addressing neutral and difficult experiences could further enhance user satisfaction and accessibility.

Graph No: 4.4- Navigation interface

5.- How motivating is the coin/streak system?

Table no: 4.5- Motivation Level

Option	Response Count
Very Motivating	29
Somewhat Motivating	41
Neutral	26
Not Motivating	2
Demotivating	2

The coin/streak system is generally motivating, with 41 respondents finding it “Somewhat Motivating” and 29 saying “Very Motivating.” This shows that most users see value in the gamification element. However, 26 respondents remain neutral, suggesting the system does not strongly influence their engagement. Only a very small number (2 not motivating, 2 demotivating) expressed negative views, indicating limited dissatisfaction. Overall, the system is effective but could be enhanced with clearer rewards or easier unlocks to convert neutral users into motivated ones.

Graph No: 4.5- Motivation Level

6.How useful are daily quizzes for engagement?

Table no: 4.6- Quizzes for engagement

Option	Response Count
Very Useful	24
Useful	55
Neutral	17
Not Useful	2
Irrelevant	2

Daily quizzes are seen as highly valuable, with 55 respondents rating them “Useful” and 24 saying “Very Useful.” This shows that quizzes are a strong engagement tool for most users. A moderate group of 17 remain neutral, indicating they may not feel strongly influenced by this feature. Only a very small number (2 not useful, 2 irrelevant) expressed negative views, suggesting minimal dissatisfaction. Overall, the data highlights quizzes as an effective strategy for boosting engagement, though refining content or rewards could help convert neutral users into active supporters.

Graph No: 4.6- Quizzes for engagement

7.- How clear are the instructions for competitions/internships?

Table no: 4.7- Clarity of Instructions

Option	Response Count
Very Clear	26
Clear	47
Neutral	18
Unclear	6
Very Unclear	3

Most users find instructions clear, with 47 choosing “Clear” and 26 “Very Clear.” This indicates strong communication effectiveness. However, 18 respondents are neutral, showing some uncertainty. A small group (6 unclear, 3 very unclear) highlight gaps in clarity. Overall, instructions are well-received but could be refined to reduce confusion.

Graph No: 4.7-Clarity of Instructions

8. Which challenge do you face most often?

Table no: 4.8- Challenges Faced

Option	Response Count
Login/technical errors	22
Navigation issues	27
Slow loading	37
Lack of clarity in instructions	34

Slow loading (37) and lack of clarity in instructions (34) are the most frequent challenges. Navigation issues (27) and login errors (22) also affect many users. This shows performance and usability are key pain points. Addressing speed and clarity could significantly improve satisfaction. Technical fixes and better guidance are priorities.

Graph no: 4.8- Challenges Faced

9. How satisfied are you with app speed and performance?

Table no: 4.9- Speed & Performance Satisfaction

Option	Response Count
Very Satisfied	26
Satisfied	39
Neutral	23
Dissatisfied	9
Very Dissatisfied	3

Most users are satisfied, with 39 “Satisfied” and 26 “Very Satisfied.” Neutral responses (23) suggest mixed experiences. A minority (9 dissatisfied, 3 very dissatisfied) highlight performance issues. Overall, speed is acceptable but not flawless. Improvements in app responsiveness could convert neutral users into satisfied ones.

Graph no: 4.9- Speed & Performance Satisfaction

10. Do you face difficulties unlocking opportunities with coins/streaks?

Table no: 4.10- Difficulty Unlocking Opportunities

Option	Response Count
Always	19
Often	36
Sometimes	26
Rarely	12
Never	7

Many users face challenges, with 36 saying “Often” and 19 “Always.” Some (26) experience difficulties “Sometimes,” while fewer report “Rarely” (12) or “Never” (7). This shows unlocking opportunities is a significant barrier. Simplifying the coin/streak system could enhance engagement. Addressing frequent difficulties is essential.

Graph no: 4.10- Difficulty Unlocking Opportunities

11. How effective are notifications and communication?

Table no: 4.11– Notifications & Communication

Option	Response Count
Very Effective	23
Effective	51
Neutral	14
Ineffective	8
Very Ineffective	4

Most respondents find notifications effective, with 51 “Effective” and 23 “Very Effective.” Neutral responses (14) show moderate satisfaction. A small group (8 ineffective, 4 very ineffective) highlight communication gaps. Overall, notifications work well but could be optimized. Clearer, timely alerts may boost engagement further.

Graph no: 4.11– Notifications & Communication

12. Which feature needs the most improvement?

Table no: 4.12– Feature Needing Improvement

Option	Response Count
Competitions	30
Internships	41
Mentorship	22
Gamification System	7

Internships (41) and competitions (30) are seen as needing the most improvement. Mentorship (22) also requires attention, while gamification (7) is less critical. This suggests users prioritize career-related features. Enhancing internships and competitions could drive higher satisfaction. Mentorship improvements would add further value.

Graph no: 4.12– Feature Needing Improvement

13. What prevents you from using the app regularly?

Table no: 4.13– Barriers to Regular Use

Option	Response Count
Lack of awareness	26
Usability issues	33
Time constraints	34
Limited opportunities	7

Time constraints (34) and usability issues (33) are the biggest barriers. Lack of awareness (26) also affects engagement. Limited opportunities (7) are less significant. This shows practical and design factors reduce usage. Addressing usability and promoting awareness could increase regular participation.

Graph no: 4.13– Barriers to Regular Use

14. What is the biggest pain point reducing your engagement?

Table no: 4.14– Biggest Pain Point

Option	Response Count
Poor usability	29
Limited rewards	42
Lack of career relevance	19
Technical glitches	10

Limited rewards (42) are the top pain point, followed by poor usability (29). Lack of career relevance (19) and technical glitches (10) also matter. This highlights the need for stronger incentives. Improving rewards and usability could greatly boost engagement. Career relevance is another area to strengthen.

Graph no: 4.14– Biggest Pain Point

15. Which new feature would you like to see?

Table no: 4.15 – Desired New Features

Option	Response Count
More competitions	24
More internships	46
Enhanced mentorship	21
Industrial projects	9

More internships (46) are the most requested new feature. Competitions (24) and mentorship (21) also have demand. Industrial projects (9) are less prioritized. This shows users value career-oriented opportunities. Expanding internships would align strongly with user needs.

Graph no: 4.15 – Desired New Features

16.How can the coin/streak system be improved?

Table no: 4.16 – Coin/Streak System Improvements

Option	Response Count
Higher rewards	38
Easier unlocks	31
More transparency	21
Unlocking internship with less coins	10

Higher rewards (38) and easier unlocks (31) are the most desired changes. Transparency (21) and fewer coins for internships (10) are secondary. This shows users want more accessible and rewarding systems. Enhancing incentives could increase motivation. Simplification would reduce frustration.

Graph no: 4.16 – Coin/Streak System Improvements

17.What changes would make competitions more engaging?

Table no: 4.17 – Competition Engagement Changes

Option	Response Count
Better rewards	36
Clearer instructions	39
Industry sponsorship	17
Shorter duration	8

Clearer instructions (39) and better rewards (36) are top priorities. Industry sponsorship (17) and shorter duration (8) are less important. This shows clarity and incentives drive engagement. Improving rewards and communication could make competitions more appealing. Sponsorship could add credibility.

Graph no: 4.17 – Competition Engagement Changes

18.What improvements would make internships more valuable?

Table no: 4.18 – Internship Improvements

Option	Response Count
Paid opportunities	38
Certification	38
Longer duration	18
Industry tie-ups	7

Paid opportunities (38) and certification (38) are equally valued. Longer duration (18) and industry tie-ups (7) are less critical. This shows users want tangible career benefits. Offering pay and certificates would greatly enhance value. Longer and industry-linked internships could add depth.

Graph no: 4.18 – Internship Improvements

19. How can the app interface be made more user-friendly?

Table no: 4.19 – Interface Improvements

Option	Response Count
Simplified navigation	35
Better visuals	39
Faster performance	20
Clear instructions	6

Better visuals (39) and simplified navigation (35) are top requests. Faster performance (20) and clearer instructions (6) are secondary. This shows design and usability are key priorities. Improving visuals and navigation would boost user experience. Performance enhancements would add further value.

Graph no: 4.19 – Interface Improvements

20. What marketing strategy would encourage you to use UPXGEN more?

Table no: 4.20 – Marketing Strategies

Option	Response Count
Social media campaigns	37
Campus promotions	36
Referral rewards	20
Email notifications	7

Social media campaigns (37) and campus promotions (36) are most preferred. Referral rewards (20) and email notifications (7) are less effective. This shows peer and digital outreach are strongest. Leveraging social media and campus presence could drive adoption. Referral programs add extra reach.

Graph no: 4.20 – Marketing Strategies

21. What is the most important improvement before launch?

Table no: 4.21 – Most Important Improvement Before Launch

Option	Response Count
Usability fixes	24
More opportunities	51
Stronger rewards	15
Better communication	10

More opportunities (51) are the top priority. Usability fixes (24) and stronger rewards (15) follow. Better communication (10) is less critical. This shows users want more career-relevant options. Expanding opportunities is essential for launch success. Usability improvements will support retention.

Graph no: 4.21 – Most Important Improvement Before Launch

22.Overall satisfaction with UPXGEN platform?

Table no: 4.22 – Overall Satisfaction

Rating	Response Count
5 = Very Satisfied	29
4 = Satisfied	41
3 = Neutral	18
2 = Dissatisfied	2
1 = Very Dissatisfied	6

Most users are satisfied, with 41 “Satisfied” and 29 “Very Satisfied.” Neutral responses (18) show moderate approval. A small group expressed dissatisfaction (2 dissatisfied, 6 very dissatisfied). This indicates strong overall satisfaction but some concerns. Addressing neutral and dissatisfied users could further strengthen loyalty.

Graph no: 4.22 – Overall Satisfaction

Chapter 5

FINDINGS

Findings

Objective 1 Findings:

- Daily users show loyalty, but monthly and rare users highlight retention gaps.
- Internships are the most valued feature, while competitions, mentorship, and projects have lower appeal.
- Most users are satisfied, but neutral and dissatisfied groups show scope for improvement.
- Navigation is mostly easy, yet some users face usability issues.
- The coin/streak system motivates many but unlocking difficulties reduce effectiveness.
- Daily quizzes are highly valued, though some users want more variety.
- Instructions are generally clear, but a few users still face confusion.

Objective 2 Findings:

- Slow loading, unclear instructions, navigation issues, and login errors are major challenges.
- Speed is mostly satisfactory, but some users report mixed or poor performance.
- Many users struggle to unlock opportunities in the coin/streak system.
- Notifications are generally effective, but some are unclear or poorly timed.
- Internships and competitions need the most improvement, with mentorship also requiring attention.
- Time constraints, usability issues, and lack of awareness prevent regular use.
- Limited rewards and poor usability are the biggest pain points reducing engagement.

Objective 3 Findings .:

- More internships are the most requested feature, showing career relevance drives engagement.
- Users want higher rewards, easier unlocks, and transparency in the coin/streak system.
- Competitions need clearer instructions and better rewards, with sponsorship adding credibility.

- Paid internships and certifications are highly valued, with longer duration and tie-ups adding depth.
- Better visuals and simplified navigation are top interface requests, along with faster performance.
- Social media campaigns and campus promotions are the most effective marketing strategies.
- More opportunities, usability fixes, and stronger rewards are the most important pre-launch improvements.
- Most users are satisfied, but neutral and dissatisfied groups highlight areas for improvement.

Chapter 6

RECOMMENDATIONS

Recommendations:

Objective 1:

- Re-engage occasional users with reminders, rewards, and fresh content.
- Expand internships with certifications, paid options, and industry tie-ups.
- Improve competitions with better rewards, clarity, and sponsorships.
- Strengthen mentorship and projects with structured guidance and real-world relevance.
- Simplify navigation, enhance visuals, and fix performance issues.
- Refine gamification by increasing rewards, easing unlocks, and ensuring transparency.
- Add variety and career-related content to daily quizzes.
- Provide step-by-step guides, Frequently Ask Questions, and tutorials to clarify instructions.

Objective 2:

- Optimize speed, fix glitches, and simplify navigation for better usability.
- Provide clear step-by-step instructions, FAQs, and tutorials to reduce confusion.
- Redesign gamification with higher rewards, easier unlocks, and transparency.
- Make notifications personalized, timely, and clear to improve communication.
- Strengthen career-oriented features with paid internships, certifications, and industry tie-ups.
- Promote awareness campaigns and flexible engagement options to overcome barriers.
- Add stronger incentives, usability fixes, and career-relevant opportunities to resolve pain points.

Objective 3:

- Expand internships with paid options, certifications, and industry tie-ups.
- Redesign gamification with higher rewards, easier unlocks, and transparency.
- Improve competitions with step-by-step instructions, better rewards, and sponsorships.
- Enhance internships with paid opportunities, certifications, and longer durations.
- Upgrade interface with better visuals, simplified navigation, and faster performance.

- Strengthen marketing through social media campaigns and campus promotions.
- Focus pre-launch on delivering more opportunities, fixing usability, and improving rewards.
- Address neutral and dissatisfied users with quick fixes and clearer communication.

ANNEXURES

7.1 Questionnaire

1. How often do you use the UPXGEN app?

- Daily
- Weekly
- Monthly
- Rarely

2. Which feature do you use most?

- Competitions
- Internships
- Mentorship
- Industrial Projects

3. How satisfied are you with the overall app experience?

- Very Satisfied
- Satisfied
- Neutral
- Dissatisfied
- Very Dissatisfied

4. How easy is it to navigate the app interface?

- Very Easy
- Easy
- Neutral
- Difficult
- Very Difficult

5. How motivating is the coin/streak system?

- Very Motivating
- Somewhat Motivating
- Neutral
- Not Motivating
- Demotivating

6. How useful are daily quizzes for engagement?

- Very Useful
- Useful
- Neutral
- Not Useful
- Irrelevant

7. How clear are the instructions for competitions/internships?

- Very Clear
- Clear
- Neutral
- Unclear
- Very Unclear.

8. Which challenge do you face most often?

- Login/technical errors
- Navigation issues
- Slow loading
- Lack of clarity in instructions

9. How satisfied are you with app speed and performance?

- Very Satisfied

- Satisfied
- Neutral
- Dissatisfied
- Very Dissatisfied

10. Do you face difficulties unlocking opportunities with coins/streaks?

- Always
- Often
- Sometimes
- Rarely
- Never

11. How effective are notifications and communication?

- Very Effective
- Effective
- Neutral
- Ineffective
- Very Ineffective

12. Which feature needs the most improvement?

- Competitions
- Internships
- Mentorship
- Gamification System

13. What prevents you from using the app regularly?

- Lack of awareness
- Usability issues

- Time constraints
- Limited opportunities

14. What is the biggest pain point reducing your engagement?

- Poor usability
- Limited rewards
- Lack of career relevance
- Technical glitches

15. Which new feature would you like to see?

- More competitions
- More internships
- Enhanced mentorship
- Industrial projects

16. How can the coin/streak system be improved?

- Higher rewards
- Easier unlocks
- More transparency
- Unlocking internship with less coins

17. What changes would make competitions more engaging?

- Better rewards
- Clearer instructions
- Industry sponsorship
- Shorter duration

18. What improvements would make internships more valuable?

- Paid opportunities

- Certification
- Longer duration
- Industry tie-ups

19. How can the app interface be made more user-friendly?

- Simplified navigation
- Better visuals
- Faster performance
- Clear instructions

20. What marketing strategy would encourage you to use UPXGEN more?

- Social media campaigns
- Campus promotions
- Referral rewards
- Email notifications

21. What is the most important improvement before launch?

- Usability fixes
- More opportunities
- Stronger rewards
- Better communication

22. Overall satisfaction with UPXGEN platform?

- 5 = Very Satisfied
- 4 = Satisfied
- 3 = Neutral
- 2 = Dissatisfied
- 1 = Very Dissatisfied

7.2 Geo Tagged Photos with the sample respondent:

The geo-tagged photographs capture the process of primary data collection for the study. The images show Gauri Kasbe a MBA student respondent from Dr. Moonje Institute of Management (DMI), Nashik, actively participating in the survey by filling out the structured questionnaire provided by the researcher.

These photos serve as evidence of the fieldwork conducted during the project and highlight the involvement of MBA students in providing feedback on the UPXGEN platform. The documentation reinforces the credibility of the research methodology by demonstrating that responses were collected systematically and transparently.

7.5 Power BI Dashboard

The Power BI dashboard for the UPXGEN Field Project visually presents user feedback collected from 100 beta testers. It transforms survey data into interactive charts and insights that highlight engagement patterns, satisfaction levels, and improvement areas.

Key visuals include:

- Usage Frequency Chart: Displays daily, weekly, monthly, and rare users to assess engagement consistency.
- Feature Preference Bar Graph: Shows which features—internships, competitions, mentorship, and projects—drive the most participation.
- Satisfaction Gauge: Illustrates overall user satisfaction and usability ratings.
- Gamification Analysis: Compares motivation levels linked to the coin/streak system.
- Pain Point Treemap: Highlights common challenges such as slow loading, unclear instructions, and limited rewards.
- Recommendation KPIs: Summarizes actionable insights like usability fixes, career-oriented improvements, and engagement strategies.

The dashboard enables quick interpretation of user behaviour and feedback trends, helping identify what works well and what needs refinement before UPXGEN's market launch. It serves as a data-driven decision tool for improving usability, engagement, and overall platform performance
